SKILLS AND QUALIFICATIONS

Programming | Java • C++ • Python • C# • JavaScript • HTML • CSS • Kotlin • SQL • React

Operating Systems | macOS • Windows 11 • Mobile

Applications | IntelliJ • Git • Eclipse • VS code • Jira • Confluence • Firebase • Jenkins • Dynatrace • Postman • Docker • Android Studio

Languages | English (Spoken & Written) • French (Spoken & Written) • Vietnamese (Spoken)

EDUCATION

Bachelor of Engineering – Computer Engineering Co-op

2021 - 2026

Concordia University, Montreal, QC

- Relevant Course: Object-Oriented | Web Programming | Data Structure | Operating Systems

DEC in Computer Science – Administration

2019 - 2021

Collège de Maisonneuve

WORK EXPERIENCE

Full Stack Developer intern

January 2025 - August 2025

Caisse Desjardins, Montreal, QC

- Debugged international transfer rounding feature in IntelliJ using Java which reduced bugs by 100%
- Developed 50+ unit tests covering backend logic and edge cases, improving code reliability and reducing regression risks
- Used Git/GitHub to manage 10+ feature branches and pull requests, track 20+ issues and collaborate with a 5-member development team
- Refactored legacy code and conducted GitHub pull request reviews, improving code efficiency by 85% while enhancing readability and maintainability
- Collaborated with developers, QA and product owners across multiple Agile sprints

Licensing Clerk – Lottery & Amusement Devices

May 2024 – December 2025

Régie des alcools des courses et des jeux, Montreal, QC

- Organized data and perform basic data analysis tasks in Excel to create and manage more than 100 lists
- Interacted with more than 40 clients per day
- Worked collaboratively with team members to achieve goals, ensuring effective communication and shared responsibilities

Manager

June 2019 – May 2025

Jolie Copie, Montreal, QC

- Maintained 3 computer systems to ensure 100% operational performance and reliability
- Organized more than 50 clients' papers per day ensuring 800\$ worth of daily revenue
- Worked under pressure serving many clients simultaneously

PROJECTS

Capstone Lesion Detection Product (DermAssist)

2026

- Trained a Vision Transformer (ViT) using Python in PyCharm to classify more than 200,000 dermoscopic images
- Detected 7 types of lesions tuning by implementing a ResNet-18 model with a 94% recall
- Developed GitHub-enabled data preprocessing and classification pipeline to organize and label 50GB of images
- Fine tuned a GPU-accelerated server that processed information 10x faster compared to a computer's CPU

Android-Controlled Automatic Pet Feeder – 2nd place

2024

- Developed an Android application in Android Studio with 5 core features for remote pet-feeder control which included meal scheduling, manual feeding and real-time device control
- Integrated Firebase Firestore to gather data from 3 different data sources guaranteeing 0% data loss
- Used 3 hardware sensors and motor controls to conduct more than 20 test cycles
- Debugged app-to-hardware in Kotlin and Java to synchronize feeding schedules

Buy/sell properties Website

2023

- Collaborated with a 5-person Agile team across 4 sprints to deliver a full-stack web application supporting more than 100 house listings
- Developed 2 REST APIs and a scalable Firestore backend schema that was integrated with a responsive React, HTML, and CSS frontend
- Implemented Redis caching for frequently accessed data, reducing website response times by 30%
- Utilized Git for version control, creating branches and pull requests

Miniature Hovercraft - 1st place

2023

- Designed and built an Arduino-based autonomous miniature hovercraft, integrating 2 sensors for obstacle detection, navigation and with real-time environmental feedback of 0.5sec
- Programmed autonomous navigation using C and C++ on Arduino, tuning sensor thresholds and motor-control logic to successfully complete a 100-meter circuit in under 2min
- Collaborated with a multidisciplinary team to integrate hardware, sensors, motors, and software, conducting more than 20 tests iterations to troubleshoot navigation errors and optimize movement stability, responsiveness, and obstacle avoidance
